Project Title:

MotherFlame - SDG 7

Instructor: Mr. Nelson Sana

Name:

AQMAR FAUZAN BIN MOHMAD SHAMSUDDIN

No Matric:

A210819

PROBLEM STATEMENT

Many households still do not monitor their solar energy usage effectively. Users often lack a simple way to record solar energy generation, track energy consumption, and monitor daily energy targets. This can lead to energy waste and low awareness of clean energy practices. This issue is related to SDG 7: Affordable and Clean Energy because better energy monitoring can encourage more efficient and sustainable energy usage.

SOLUTION

MotherFlame Clean Energy System is a mobile application that helps users record and monitor solar energy usage. Users can add energy logs, view energy statistics, and set daily energy targets through multiple screens. The app uses ViewModel and StateFlow to share data between screens in real time.
